

Pannier Exhibit Base

Assembly and Installation Instructions

For use with
the following
exhibit bases:

Wall Mount

FORM # WMINST
REV 10.22.19

Installing a Pannier exhibit base is as easy as 1, 2, 3.

Step 1 - Inspect and Organize

As soon as your shipment arrives inspect all pieces and assembly components to make sure your delivery is complete.

For each exhibit frame, the following will be included: (Figure 1)

- Frame with Removable Top Extrusion
- Exhibit Panel (Use Pannier's Fiberglass Embedded (**FE**) or Gel Coat Laminate (**GCL**) panels for best results)
- 1/4"-20 Phillips Flat Head Screws

Assembling and installing a Pannier Wall Mount Frame is a straight forward process made even easier if two or more people work together using the proper tools and materials to complete the task.

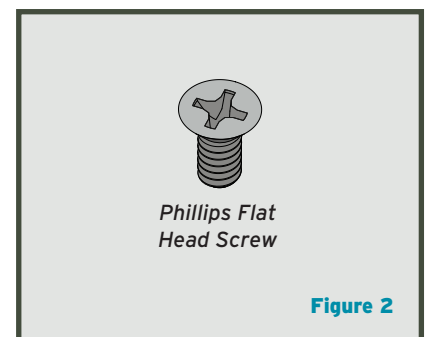

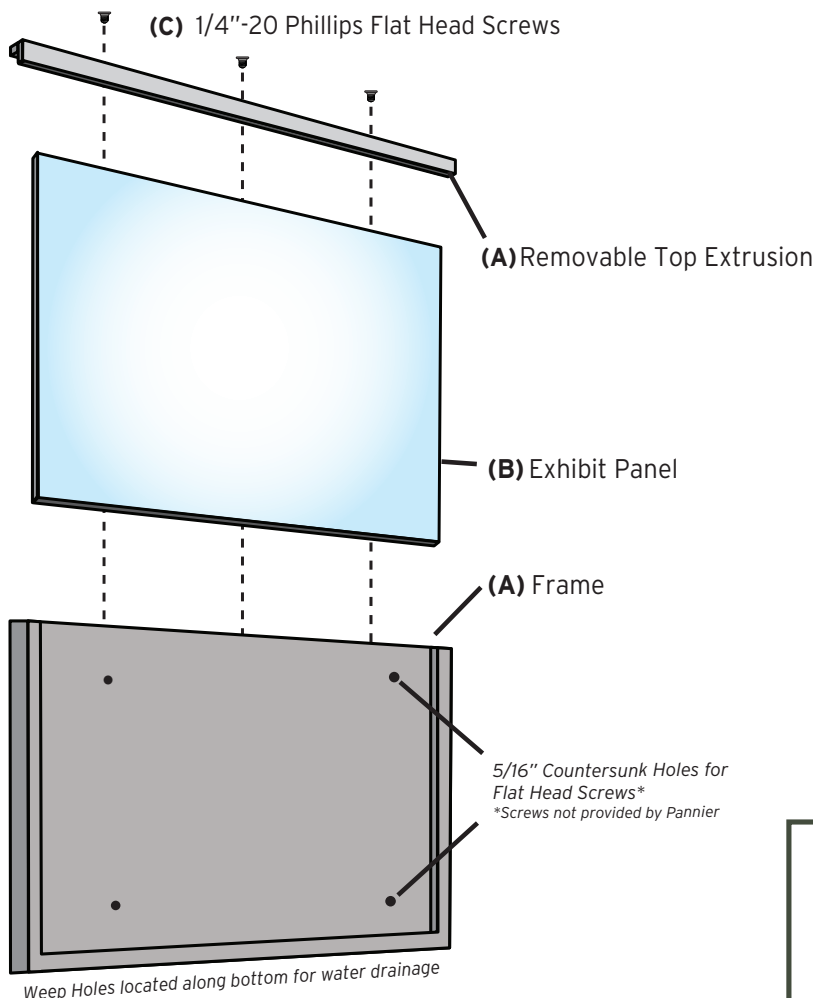

Step 2 - Assembly

If you ordered a panel from Pannier, take the panel out of the wall mount frame by removing the screws across the top extrusion. Normally, the removable extrusion is at the top of the frame and the bottom of the frame is indicated by weep holes. The type of screw used to mount the frame to the wall will be determined by the type of surface you are mounting the frame to.

To install the exhibit panel, slide your exhibit panel face-forward into the frame, making sure the panel bottom matches the frame bottom as indicated by weep holes. Attach the removable extrusion with supplied 1/4"-20 screws to securely enclose the exhibit panel. Insert screws (see Figure 2) and screw into holes with a phillips head screw driver until inserted all the way.

Recommended tools and materials:

- Level
- Phillips Head Screw Driver
- Power Drill
